

The a-MAZE-ing Way We Get Natural Gas!

Let's start to get Gas Smart! This maze will help you see how natural gas is made and delivered to your home. Follow the six steps in order to understand the process of making and delivering natural gas.

1 Tiny ocean plants and animals die, decay and are covered with sand, mud and rock.

2 For 200 million years, this mixture builds pressure and heat; natural gas and oil are formed.

3 Today, large pipes bring natural gas to Earth's surface.

4 Natural gas is then cleaned, processed and pressurized.

5 Natural gas is sent across the United States through long underground pipelines.

6 A rotten egg-like smell is added to help detect leaks. Natural gas is then delivered to your home!

FINISH!
