

# THERMOSTAT OPTIONS

During your appointment, Peoples Gas and ComEd® offer two energy-efficient thermostat options to replace your existing thermostat. The information below will help you choose the right option for you.

The smart thermostat is limited to customers of Peoples Gas and ComEd who have a natural gas furnace and central air conditioner, in addition to a Wi-Fi connection in the home. Additional requirements may apply. Ask your energy advisor about what products you qualify for during your assessment or ask the customer representative when scheduling your appointment.

## WHAT IS A PROGRAMMABLE THERMOSTAT?

Programmable thermostats can be set to manage the temperature in your home. Program this thermostat to best fit your schedule and lifestyle. You can program weekdays separately from weekends so your comfort is optimized each day of the week.

## WHAT IS A SMART THERMOSTAT?

Smart thermostats have similar features as programmable thermostats, but they also perform more advanced functions and have additional benefits. A smart thermostat allows you to monitor and control the temperature in your home remotely from your smart phone or other web-enabled device. Also, smart thermostats save energy and maximize comfort by automatically adjusting the temperature of your home to meet your preferences and activities.

The ecobee3 smart thermostat, available during your appointment, uses a remote sensor to keep the occupied spaces in your home comfortable. Since the temperature of your home can be controlled by a web-enabled device and monitored with the remote sensor, the ecobee3 is a very efficient way to control heating and cooling to save energy and money without sacrificing comfort.
